## **BRO** Farmer Assistance Program Office **ASSISTANCE PROGRAM FOR SMALL FARMERS**

### **HIGHLIGHTS OF ACCOMPLISHMENT RE: TODAS DENGUE, TODO NA'TO (IKA-WALONG KAGAT)**

Dengue is a mosquito-borne viral infection found in tropical and sub-tropical climates worldwide, mostly in urban and semi-urban areas.

The most important way to prevent and control this is to eliminate favorable sites of the mosquitos. This can be done by maintaining cleanliness of the surroundings and discarding containers that collect water suitable for breeding.

On July 31, 2021, BRO Office personnel gathered and worked together to ensure the cleanliness within the vicinity of Capitol Compound. Everyone was given tasks and area to clean such as uprooting grasses, removing unwanted plants, trimming trees and plants to eliminate sources of accidents. This was successfully implemented to prevent the spread of dengue.

This activity has ignited the spirit of cooperation and commitment towards a healthy and sustainable environment.
